A growing collection of natural language corpora is now available to the UGA community. This colloquium offers a live demonstration of the search tool cqp, showing how corpora that are available right now may be used to address questions about how people use language, what words mean, and how authors achieve their literary ends.

Bonus topics to be explored in the interactive Q&A that follows include but are not limited to:

- implications of very large corpora for Experimental Philosophy
- implications of parallel corpora for Comparative Grammar (e.g. Romance)
- opportunities for digital humanists within computational linguistics

**Text Corpora That You Can Use**

Presented By: John Hale, Arch Professor of Linguistics

**JANUARY 18 • 4:00 • DIGI LAB**

3rd Floor Main Library
